INDEPENDENT DRIVING

CAROSPEED CLASSIC

Hand Control for accelerator and brake

The **Carospeed Classic** is a floor mounted hand control, installed along the vehicles transmission tunnel, that is designed to be used with your left hand to operate the accelerator and brake in the vehicle. You activate the accelerator by pulling the lever towards yourself, to brake you push the lever forward towards the dashboard.

Being installed on the left-hand side of the driver's area gives the driver the natural feel of driving keeping their right hand on the steering wheel. The other advantage with its position inside of the vehicle is that it does not impeded on the drivers seating position or the steering wheel, meaning the driver can utilise more of the vehicles original features and spacing.

The **Carospeed Classic** comes with a hill holder function as standard. The hill holder function acts like a park brake, leaving your hands free to change gears or adjust other functions in the vehicle.

FEATURES

-  Universal fitting design made to suit most vehicles
-  Hill holder function as standard
-  Optional cruise control operation
-  Operated with your left hand
-  Recommended for use with automatic vehicles only
