GETTING SEATED

AUTO COOL STEPS

The Power Step automatically deploys as the door opens and closes, emerging and retracting even on extreme slopes. The power step is fully enclosed and features a weatherproof, non-skid surface, and can be fully submerged in water. The power step is designed to fit under all doors and is available in a range of sizes. The aluminum power step has a capacity to withstand up to 900lbs of weight. The power step operates in an extreme range of temperatures from -22 degrees to 176 degrees Fahrenheit. Our steps incorporate an electronic circuit protection, electronic limit protection, and overload protection.

The *electric* and *manual* steps from **Auto Cool** allow the user easy access into their vehicle. The step can be fitted just under the sliding door of a van and comes in a variety of sizes.

To protect against all types of weather conditions, the steps also come with different treads; with some models having slip resistant grip.

FEATURES
