Harness Solutions

Easy Travel Magnet Harness

The Easy Travel Magnet Harness is a behavioural support solution designed to provide safety and comfort for vehicle passengers with disabilities or medical conditions. Featuring an anti-escape magnetic buckle system, this harness can be used to keep occupants safe while transporting in the vehicle if they are exhibiting challenging behavioural needs. Its ergonomic vest design ensures a snug fit while allowing freedom of movement of the upper limbs. The design of the harness allows for it to be fitted either in the vehicle seat or before getting into the vehicle, allowing for versatility across various challenging behavioural needs.

The Easy travel Magnet Harness is primarily designed for us with motor vehicle seating positions, however in some cases can be adapted to other seating systems and wheelchairs upon further assessment. The harness must be used in accordance with the vehicles occupant seatbelt system but does not require any modifications to the vehicle seats for fitment.

Please note that this harness is not a restraint. The vehicle occupant's seatbelt must always be used on top of the harness for legal and safe transport.
